

MF COMP RODS

BY **ROADsafe**

Check out these Mudders!

Roadsafe have designed and manufactured a range of COMPETITION style rods for Patrols & Cruisers.

Manufactured from **38mm solid 4140 chromoly** high tensile steel, the new 'MF' rods have been re-designed to offer Hard Core 4wders a stronger alternative.

The 'MF' rods are supplied electrocoated, for corrosion and rust resistance, with a satin black finish to follow through the tuff truck look.

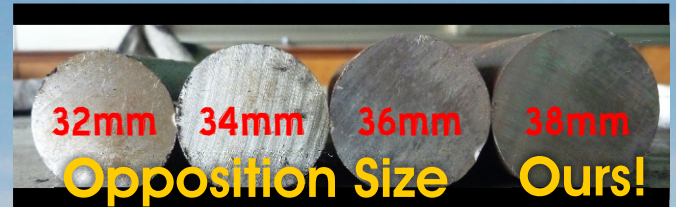

These 'MF' rods are an awesome addition to the expanding range, and are currently offered for the following applications:

- MF-DL704COMP - Patrol GQ Track Rod
- MF-DL706COMP - Patrol GU Track Rod
- MF-DL700SCOMP - Patrol GQ Drag Link
- MF-DL710SCOMP - Patrol GU Drag Link
- MF-TR4220COMP - Landcruiser 80 series Relay Rod
- MF-TR4410COMP - Landcruiser 80 Series Track Rod

Not only has the rod been changed, the 'MF' design has also been altered to now include **greasable female ends** on all applications, offering greater strength over the standard male ends... making the 'MF' rods extremely tough for the average four wheel driver.

Designed specifically for comp vehicles to take punishment time and time again, the new 'MF' rods are a must for those interested in improved strength and handling over Australia's tough terrain.

Weighing in at over 12kgs each, these 'MF' rods will certainly make the underside of your truck look and act tough!

Why 4140 Chromoly

Because it's tough! "4140 is a 1% chromium - molybdenum medium hardened general purpose high tensile steel. It is generally supplied hardened and tempered in the tensile range of 850 - 1000 Mpa (condition T).

Pre hardened and tempered 4140 can be further surface hardened by flame or induction hardening and by nitriding.

4140 is used extensively in most industry sectors for a wide range of applications such as: Axle Shafts, Bolts, Crankshafts, Connection Rods, Chuck Bodies, Forks, Gears, Hydraulic Shafts & Parts, Motor Shafts, Nuts, Pinch Bars, Sockets, Spindles, Sprockets, Studs, Torsion Bars etc."
